

Lingual Braces

A great alternative for those who are conscious about the look of traditional braces.

About

Lingual braces, also known as “inside” braces are a more recent orthodontic treatment where the brackets and wires are attached to the inside of the teeth rather than the outside, making them practically invisible.

Cost | From \$8,500

Several factors may vary and increase the cost of treatment.

After Care

Make sure to brush after every meal and clean both above and below the brackets of your braces.

Procedure

1. An accurate impression is taken of your upper and lower teeth.
2. Your impressions will be sent to a lab to create customised brackets to match the shape of your teeth.
3. Once received, the braces will be cemented onto the back surfaces of your teeth.

What to Expect

During the first few weeks, you may have difficulty with your speech and find it hard to swallow. The braces may also irritate your tongue causing sores and discomfort. Your tongue will eventually get used to them.
