

# Removable Appliances

Removable dental appliances can fix the alignment of a single tooth as well as widening the upper or lower arches.

## About

A removable appliance is an orthodontic brace made from a plastic plate with wires coming from the sides. The wires grip the teeth to keep the brace in place.

For removable dental appliances to be effective you must wear them all the time unless you are playing sports. You will require regular appointments for adjustment and monitoring of your appliance. If you experience any irritation of the cheek, gum or tongue, our orthodontists here can make adjustments so it will be more comfortable.

## Caring for your Removable Brace

They are very easy to clean because they are removable. This also makes it simple for you to maintain good dental hygiene as you are able to continue normal brushing and flossing. You clean the orthodontic appliance using a special cleaning solution and our orthodontists will give you special advice on how to keep it clean.

## Cost | From \$500

Several factors may vary and increase the cost of treatment. We can advise you of the full cost and provide a treatment plan after your first orthodontic consultation.
