

White Fillings & Mercury Removal

About

Fillings are used to repair teeth affected by decay, cracks, fractures or trauma. Our dentists are able to replace your old fillings or apply new white fillings. All new fillings are 100% safe composite resins which are amalgam and mercury free.

Amalgam Fillings

Amalgam fillings are silver coloured. They are made by combining mercury and a silver alloy (50% mercury, 35% silver, 15% tin, copper and other metals).

We do not use amalgam fillings in our dental practice and strongly recommend removal of these fillings.

Composite Fillings

Composite fillings are tooth coloured and are made from powdered glass quartz, silica or other ceramic particles added to a resin base. After the tooth is prepared, the filling is bonded onto the area and a light shone onto it to help the filling set. The dentist will choose a shade to match your own teeth, although over time staining can happen.

Cost | From \$200

Several factors can vary and increase the cost of treatment, including the position of tooth in your mouth, the shape of your teeth and the degree of difficulty during the procedure.

Paramount Dental Sydney

Dr Amrinder Oberoi

Principal Dentist - BDS Hons. (NZ)
